Commercial News

A general overview of the market situation as well as lead times and prices

Discretes

According to the market environment, the lead times are low. It is recommended to place long-term orders as the production time (cycle time) is higher than the lead times indicate. Prices remain stable.

A general overview of the market situation as well as lead times and prices

Memory

ALL PRICE TENDENCIES ARE INDICATED IN USD

Please provide long-term demand on all technologies. Forecast/Order backlog is key for planning demand properly.

General situation: Price and lead time levels highly depend on supplier and product technology. Trend for increasing price levels and lead times on latest technologies, very good availability on legacy technologies due to missing/reduced demand from industrial and automotive customers.

DRAM: Pricing and lead times increasing - impact on LPDDR4/DDR4 and newer technologies like DDR5/LPDDR5 - Legacy DRAM remain to have very solid availability. Unplanned upsides on newer technologies might be difficult to supply.

NAND Flash: Availability dependent on supplier. Increasing prices and lead times, especially on latest tech (SSDs) possible. Unplanned upsides difficult to supply.

NOR Flash: Prices and lead times flat - very good availability on legacy devices.

SRAM: Good availability - minor constraints on specific technologies.

	Lead Time (wk)	Price
Serial NOR Flash	↔ 24-36	↔

	Lead Time (wk)	Price
FRAM	↔ 8-10	↔
